## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4, 6, 8 & 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eng et al (U.S. 5751708) and Martineau (U.S. 5915226).

4. As per claims 1, 2, 3, 4 & 9 Eng et al disclosed a method for providing a network environment of information data exchange by setting a closed network as requested from a plurality of clients, comprising: receiving a request to provide said network environment from one of said clients representing a group (col.2, lines 8-16); setting said closed network for each of said clients in the group requesting said closed network in response to the received request (col.2, lines 17-25) and informing to said client of use permission based on a predetermined discriminator and an access priority, said access priority representing a priority of the group (col.2, lines 17-25, col.4, lines 50-67 & col.5, lines 1-10), only member clients of the group

Art Unit: 2143

being able to access to said closed network (col.4, lines 36-49). However Eng did not explicitly disclose managing a use time of said closed network for the group.

In the same filed of endeavor Martineau disclosed managing a use time of said closed network for the group (col.7, lines 23-29 & col.13, lines 1-6).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have incorporated the mechanism of managing/monitoring the use of time in a network as disclosed by Martineau in a method for providing a network environment as disclosed by Eng in order to make the network system more versatile by having network time measuring mechanism resulting in accurate billing status of clients using the network.

5. As per claim 6 Eng-Martineau disclosed a server for providing a network environment with a plurality of clients according to Claim 4, wherein said access priority is decided from an Internet protocol address of said client (Eng, col.3, lines 6-29).

6. As per claim 8 Eng-Martineau disclosed a server for providing a network environment with a plurality of clients, according to Claim 4, wherein said server further has a service giving means for billing said client according to a use time designated by said client and an extended time used by said client ((col.7, lines 23-29 & col.13, lines 1-6).

Art Unit: 2143

7. As per claim 5 Eng-Martineau disclosed a client device used in a system for providing a network environment with other client devices and a server, the client device comprising: communication device configured to communicate with said server, a communication setting manager configured to prepare for communication passes with said server (Eng, col.2, lines 8-16), a receiver configured to receive a message transmitted from said server, a store configured to store said message, a converter configured to convert said message into a display data format and convert input data to a message, and a terminal job manager configured to manage said communication data conversion (Eng, col.3, lines 5-29).

8. As per claim 7 Eng-Martineau disclosed a client device used in a system for providing a network environment with other client devices and a server according to Claim 5, wherein said converter has a main program operating regardless of a software environment used by said client and a plurality of subprograms operating according to said software environment used by said client, the system starts said subprograms according to said kind of said data in said message, and converts said display file (Eng, col.3, lines 5-29).
